Professional Summary

Enthusiastic and detail-oriented **Front-End Engineer** with a solid background in building responsive, user-centered web applications using **React, TypeScript, JavaScript, HTML, and Semantic Custom Css**. Experienced in **component-based architecture**, state management with **React Hooks**, and **API integration** using tools like **Postman** and **CORS configurations** to ensure seamless data flow across different environments. Adept at debugging, refactoring, and improving code quality to enhance performance and scalability. Recognized as a **fast learner and effective problem solver**, I quickly adapt to new technologies and development patterns, continuously improving processes and delivering high-quality web solutions in collaborative team environments.

WORK EXPERIENCE

• 2023 – Present

OneStop Solutions – Scalable TypeScript Refactor MVP Project.

- Refactored a critical module of a production web app using **TypeScript** to enforce **strong type safety** and eliminate runtime type errors, resulting in **reduction in debugging time** and more predictable code behaviour.
- Designed a **modular, reusable model architecture** that can be seamlessly integrated into multiple web applications, improving **development efficiency** by ensuring consistent code quality across projects.
- Transformed legacy JavaScript code into **type-driven, component-based structures**, improving maintainability and enabling faster feature deployment cycles.
- Delivered a **Minimum Viable Product (MVP)** showcasing a **scalable TypeScript framework** adaptable for diverse business use cases, enhancing the company's capacity to spin up new client applications rapidly.
- Improved developer onboarding and collaboration by creating **standardized, self-documenting code patterns**, setting a foundation for future system growth and scalability.

March 2025 – Present

Password Validation and Authentication Module – MVP Project

- Designed and developed a **scalable, reusable password validation and authentication module** for modern web applications using **React** and **TypeScript**, addressing the rising need for **strong user credential security** in 2025's digital ecosystem.
- Implemented a **custom validation engine** leveraging **regular expressions, schema-based validation, and React Hook Form** to ensure compliance with enterprise-level password standards — including length, complexity, and special character requirements.
- Integrated **real-time strength indicators and live error feedback** to improve user experience and reduce failed registration attempts by simulating secure password creation patterns used in fintech and e-commerce platforms.
- Built the system as a **modular component** that can be plugged into multiple React-based products, enabling easy reuse across different authentication workflows and improving developer productivity.
- The MVP demonstrates practical problem-solving in **security UX design, front-end form architecture, and reusable component development** — directly applicable to scalable production environments.

April 2022 – June 2023

Office Management App - Nalot Multisystems Limited, Abuja

- Actively contributed in building a platform for office operations e.g: attendance clock in system.
- Assisted in implementing staff user authentication, providing role-based access to internal company data, with functionality for users to view, manage, and update their profiles and related information.
- Accurately arranged, store and utilize company data for efficient usage and keeping up with project description.
- Efficiently organise, stored, and utilized company data to support streamlined operations and ensure alignment with project requirements.

August 2023 – November 2025

Food Delivery App – MVP.

- Designed and developed an **end-to-end food delivery web application** using **React**, **TypeScript**, and **Node.js**, demonstrating full-stack proficiency and strong product ownership.
- Implemented dynamic cart functionality with **custom React Hooks** such as `useCart` to manage item selection, storage, and accessibility, improving the overall **user experience and session persistence**.
- Integrated APIs and optimized data flow between front-end and back-end systems, achieving **faster response times and smoother checkout processes**.
- Led front-end architecture and performed lightweight back-end configurations to **boost load speed and maintain efficient state synchronization**.
- Built a scalable **MVP (Minimum Viable Product)** model that showcases problem-solving, technical flexibility, and the ability to transform ideas into functional web solutions.

April 2021 – April 2024

Digital Economy Learning Centre with NITDA - National Information Technology Development Agency, Nigeria

- Provided Internet Access for various Learning Centres Across the nation with KU Band: 3mbps Download Speed, 2mbps Upload Speed, 400gb
- Installed SASS E learning material on a local Server connected to every system in each learning Centre for Students to guide their learning activities and for Teachers to improve teaching experience.
- Installed Computers and Idea hub from HUAWEI for e learning Centres across the Nation.
- Provided Digital Tutorial Classes for the centres across the Nation.

Website Development for a Construction Company at Nalot Multisystems Limited, Nigeria

- Developed and deployed a responsive website for a construction company using WordPress and PHP, enhancing online visibility and accessibility across devices.
- Customized theme and plug in while also using PHP to meet specific business requirements such as service listings, contact forms, and project showcases.
- Integrated Dynamic pages e.g., blog, portfolio, testimonials) to highlight completed projects and drive client engagement.
- Optimize website performance and SEO, improving page load speeds and boosting search engine rankings.
- Implemented secured contact form sections with form validation and spam protection, increasing lead generation effectiveness.
- Configured Hosting and Domain Management ensuring uptime, data backups, and SSL certificate installation for secure user experience.
- Used PHP for backend customization, including dynamic page templates, custom post types, and admin panel enhancements.
- Maintained and updated the website post-launch, providing ongoing technical support and implementing new features based on client feedback.

SKILLS

- ★ Office 365
- ★ JavaScript
- ★ Presentation
- ★ HTML
- ★ React Library
- ★ TypeScript
- ★ CSS, Tailwind
- ★ WordPress

EDUCATION

May 2015 – September 2019

Kwara State University.

Bsc. Computer Science

Graduated with Honors From the Department of Computer and Information Science in 2019

UDEMY/COURSERA

Certification Course, 2022-2025

- Full JavaScript Fundamentals Certification
- Advanced JavaScript Certification.
- TypeScript Certification
- Full React Js course, Redux, Hooks & Context

January 2025 – till Date

Havard University - CS50, Associate Programme

Professional Certificate / edX / HavardX

Completed foundational coursework in Computer science, covering algorithms, data structures, SQL, HTML/CSS, and web development principles.

HOBBIES

- Football
- Basketball
- Board Games
- Sky Diving
